Fundamentality

A stated objective of the company's performance is to continuously improve the quality EHS management system with the aim of total quality management (TQM) and resulting zero-defect strategies for our products and services.

Our Customers

Satisfied customers are the foundation of our successful future. Our products and services must be distinguished by meeting the requirements of our customers without restriction and better than those of our competitors. We solve problems in the areas we are technologically proficient in and fulfil the expectations of our customers in partnership and with innovative ideas so convincingly that we can achieve high market shares and realize reasonable prices.

Our Employees

Our employees and managers are our most important internal potential (resource). All managers must work intensively to ensure that the company's goals and, in particular, the goals and strategies for the quality of our products and services are understood by all employees - depending on their area of responsibility - and that they are also fully implemented and lived out.

Our Shareholders

Our shareholders provide us with the second important resource, namely a considerable part of the financial resources required by the company. Our objectives towards our shareholders are formulated in our corporate planning. Essential here is the attaining of a corresponding profit to the interest on the capital employed.

Our Suppliers

In order to meet market requirements, strategic purchasing follows a global purchasing strategy. We strive for a long-term business partnership with our suppliers, in which we naturally take account of our technical and economic interests. An essential goal of the cooperation with our suppliers is their early integration into our processes to achieve common quality objectives. Basis for this are clear agreements regarding the quality of delivery and QM/EHS system requirements.
